

Position: Scientist (literature mining, part-time)

Job Code: LIT-HG

Description:

We are seeking a highly motivated individual doing literature mining in the field of protein homeostasis, including protein synthesis, folding, trafficking, degradation, and clearance. The working hours are flexible and can be part-time. This position will be paid by the hours of work. The research interest is focused on gene networks involved in proteome homeostasis and investigate their disease relevance. This scientist will be part of a bioinformatics team working with cross-discipline teams including biology, pharmacology, and medicinal chemistry.

Competencies:

- Ph.D. or Ph.D. candidate in the research field of protein folding, trafficking, or degradation.
- A strong publication record in the field is a plus.
- Strong interest in pathway analysis and bioinformatics is preferred.
- Self-starter and problem-solving skills.
- Excellent written and verbal communication skills.
